To Nina Contreras d'Agosto and her supporters

This document confirms that Nina Contreras d'Agosto and her supporters (www.ninalaguerrera.org) have so far contributed to our GSD1b research projects with a total of 5886,51 €. These contributions are very important to find better treatments and therefore to improve the lives and well-being of patients and families living with GSD1b. The donations received so far contributed to helping us to setup a method to measure 1,5-anhydroglucitol in dry blood spots. This will make following the changes in the concentration of 1,5-anhydroglucitol in blood following treatment with empagliflozin much easier for patients and clinicians that follow these patients.

My lab members and myself at the de Duve Institute are very grateful for your contribution.

With my best wishes,

Prof. Maria Veiga da Cunha
